The IceJax I is based on the proven patented Snojax II design and is a smaller version of the Icejax II. It features unique interchangeable sides that can either be mechanically fastened or adhesive mounted. Mount the flat side down on a 3" flat surface or simply flip the unit over to straddle a small minor rib. They will fit most screwed-down 36" panels that have three 12" flats or four 9" flats and the most standing seam floating panels. Professional ATI test results show the Icejax I held 4200 pounds when screw mounted and up to 500 pounds when adhesive mounted using the Surebond SB-190. All tests were performed simulating realistic snow loading conditions applied to the face of the guard.

Placement in just isolated areas such as chimneys, doorways, vents and partial roof sections is NOT recommended.
