The "ACE" can be adhesive or mechanically fastened and requires a 3" flat mounting area. They will fit most brands of screwed-down 36" panels that have three 12" flats and the majority of the standing seam floating panels with at least a 3 inch flat area. The waffled base enhances the bonding power when used with the SB-190. Starter points are provided for mechanically fastening with self-drilling screws. Professional ATI test results show the SnoBlox "ACE" held up to 4849 pounds when screw mounted and 1449 pounds when adhesive mounted using the Surebond SB-190. All tests were performed simulating realistic snow loading conditions applied to the face of the guard.

Placement in just isolated areas such as chimneys, doorways, vents and partial roof sections is NOT recommended.
