Safely break apart sliding snow and ice! The SnowBreaker can be mechanically fastened or adhesive mounted. Because of the cutting edge design, it is not conducive to receiving a significant shear load. The SnowBreaker is effective in preventing damage caused by the sudden release of snow and ice, all without worries of overloading your roof. As the snow and ice slides on the roof, this cost effective product minimizes the danger by slicing the frozen precipitation into small pieces so it can safely come off the roof. The forward cutting edge and the tucked back rear support form a triangular shape that acts like a fin to split up the frozen precipitation. Fits most popular 36" panels with four 9" flats.

Visit www.SNOWBREAKER.com for spacing and isolated placement recommendations.
